Restoration Efforts for Buoy 41036

Date:	3/26/2015
Time:	6:00 PM – 7:30 PM
Meeting Location:	NC State CMAST Room 306, 3rd Floor 303 College Circle Morehead City, NC

The NC Maritime community is organizing to replace buoy 41036 which provided valuable marine weather and sea condition information for area marine interests.

UNC-Wilmington's Coastal Ocean Research and Monitoring Program, in conjunction with local area marine interests, have a proposal to replace this buoy.

- Stage 1 - Immediately replace 41036 it with a MET station
- Stage 2 - Place wave buoy in conjunction with the new buoy
- Stage 3 - Long term planning to maintain the buoy

This buoy is very important for ALL mariners along the NC coast, not only for the real time weather information it provides, but also to weather forecasters for accurate weather predictions.

We are hosting a meeting on Thursday, March 26, to discuss what is required to replace 41036 and YOU are invited.

If you would like more details, please contact:
