Important Information Regarding Third-Party Content

This is not an investment recommendation from Fidelity Investments. Fidelity provides this information as a service to investors from independent, third-party sources.
Performance of analyst recommendations are provided by StarMine. Current analyst recommendations are collected and standardized by Investars.
See each section in this report for third-party content attribution, as well as the final page of the report for additional important information regarding third-party content.

Price on 3/27/2015: $0.016
Market Capitalization: $1.5 M

American Graphite Technologies Inc

Equity Summary Score is a weighted, aggregated view of opinions from the independent research firms on Fidelity.com. It uses the past accuracy of these firms in determining the emphasis placed on any individual opinion.

First Call Consensus Recommendation is provided by Thomson Reuters I/B/E/S, an independent third-party research provider, using information gathered from contributors. The number of contributors for each security where there is a consensus recommendation is provided. Each contributor determines how their individual recommendation scale maps to the Thomson Reuters I/B/E/S 5-point scale.

Visit Fidelity.com for firm descriptions, detailed methodologies, and more information on the Equity Summary Score, First Call Consensus, opinion history and performance, and most current available research reports for AGIN.

Equity Summary Score

Insufficient Coverage Provided by StarMine as of 3/29/2015

There are not enough independent firm opinions to create an Equity Summary Score for this symbol at this time.

Firm Opinions

Provided by Investars as of 3/28/2015

Firm[1] / Aggregate Opinion	STANDARDIZED OPINION		Investars Smartindex	CURRENT FIRM OPINION	
	Opinion	1 Year History		Date	Opinion

• Opinion used in Equity Summary Score

1. (i) after the Firm Name indicates an independent firm that derives no financial benefit from the nature of their recommendations.
2. StarMine Relative Accuracy is based on a statistical aggregation of how well a firm performed on all of its individual stock recommendations in a given sector. StarMine first calculates the individual scores for each set of recommendations for a single stock over a 24 month period. Then StarMine rolls up these individual performance scores into a firm's sector score.
3. Each firm has its own recommendation categories, making it difficult to compare one firm's recommendation to another's. Investars, a third-party research company, collects and standardizes these recommendations using a five-point scale.

† The Equity Summary Score provided by StarMine is current as of the date specified. There may be differences between the Equity Summary Score analyst count and the number of underlying analysts listed. Due to the timing in receiving ratings changes into the Equity Summary Score model, the Equity Summary Score analyst count may lag the ratings count displayed by one or more days. There may also be analyst count variations for symbols with multiple share classes and ADRs. More details on Equity Summary Score calculation are included in the Understanding and Using the Equity Summary Score Methodology (PDF).

About StarMine SmartEstimate

The StarMine SmartEstimate seeks to be more accurate than the consensus EPS by calculating an analyst's accuracy and timeliness of an analyst's estimates into its estimate of earnings.

Actuals vs. Estimates by Fiscal Quarter

Data provided by Thomson Reuters First Call

** The Industry Average and Percentile Rank methodology is based on the daily list of U.S. equity securities in each industry to which a company belongs, as determined by Standard & Poor's. S&P uses the Global Industry Classification Standard (GICS)SM, an industry classification system developed by S&P in collaboration with Morgan Stanley Capital International (MSCI).

A company is assigned to a single GICS sub-industry according to the definition of its principal business activity as determined by Standard & Poor's and MSCI. Revenues are a significant factor in defining principal business activity; however, earnings analysis and market perception are also important criteria for classification.

Securities are first grouped into their respective S&P GIC Industry, null values are removed and then the percentile is computed. The percentile is the value of a variable below which a certain percent of observations fall. So the 20th percentile is the value (or score) below which 20 percent of the observations may be found. Sometimes, being in the 100th percentile is not the best for items such as Debt to Capital Ratio where a lower number means less debt. Therefore, being in the 1st percentile indicates lower debt than its peers in the industry.

The Industry Average is a market cap-weighted average of the non-null values in the industry.
